We make best efforts to bring the best internships on the platform, educate students about the same and ensure that they can apply to these internships in a seamless manner. However, the eventual hiring decision, rightfully, resides with the organization which is hiring interns and is dependent on several factors such as the skills of the applicant, quality of her applications, competition, requirements and assessment process of the organization, student's availability at the required location and for the desired period of the internship etc. Since these factors are beyond Internshala's control, Internshala does not and can not guarantee an internship to an applicant.

All rights not expressly granted herein are deemed withheld. All use by a Party of the other trade names, trademarks, service marks, logos, etc., and any goodwill associated therewith, will inure to the benefit of the grantor.

Confidentiality:

Internshala and the College will not disclose the details of this agreement and any private information that they come across when this agreement is in effect to any third-party.

If either Party (the "Receiving Party") under this Agreement gains access to confidential information of the other Party (the "Disclosing Party") concerning the Disclosing Party's prices, business, plans, technology, products, and other non-public information of the Disclosing Party (collectively, "CI" or "Confidential Information"), then the terms of this section will apply. CI includes all information in tangible or intangible form that is marked or designated as confidential by the Disclosing Party or that, under the circumstances of its disclosure, should be considered confidential. The Disclosing Party owns all right, title and interest, including all patent, copyright, trademark, trade secret rights and any other intellectual property or proprietary rights in any jurisdiction, including any and all applications, renewals, extensions and restorations thereof, in the Disclosing Party's CI. Each Party agrees that it will not use in any way, for its own benefit or the benefit of any third party, except as expressly permitted by, or as required to implement, this Agreement, nor disclose to any third party (except as required by law or to such Party's attorneys, accountants and other advisors as reasonably necessary), any of the Disclosing Party's CI. Chapter - III

EXPERIMENTAL SETUP

This chapter presents experimental setup of laser beam machining (LBM) used in the present study. Properties of AISI 304 material, methodology of present work and measurement of kerf characteristics, dross height and heat affected zone (HAZ) are also discussed. Further, optical microscope and scanning electron microscope (SEM) used in the present study are also discussed.

3.1 LBM setup

The present experimental work is performed on CO_2 and fiber LBM setup. Experiments for CO_2 laser machining is performed at M/s Shree Electricals, Pune, India and for fiber laser at M/s Kakade Lasers, Pune. Specifications of CO_2 and fiber LBM setup are given in Table 3.1. Nitrogen gas is used as an assist gas during the experiments. Stand-off distance of 1.5 mm is maintained during the experiments. On the basis of literature review and available machine setups, some trial experiments are conducted to decide the levels of process parameters for material thickness 15 mm, 20 mm and 25 mm. For experimental tests, 17 specimens of size 30 × 30 mm are cut for each thickness.

Table 3.1 Specifications of CO_2 and fiber LBM setup

	CO_2 laser	Fiber laser
Mode of operation	CW and pulsed wave (PW)	CW and PW
Composition	CO_2+He+N_2 (3:8:4)	Optical fiber
Emission wave length	10.64 μm	1.064 μm
